

## Magento Dark Vault Theme Installation Guide

## Installation

1. First of all, back up your store database and web directory. It is wise to perform this procedure before any installation.
2. On your back end, go to **System** → **Magento Connect** → **Magento Connect Manager** and log in to Magento Connect Manager with administrator credentials.
3. Under “Direct package file upload” section, browse for extension archive file and hit “Upload”.

The screenshot displays the Magento Connect Manager interface. At the top, there is a navigation bar with 'Extensions' and 'Settings' tabs, and links for 'Return to Admin' and 'Log Out'. Below this, there are sections for 'Settings', 'Install New Extensions', and 'Direct package file upload'. The 'Direct package file upload' section is highlighted with a red border and contains the following steps: 1. Download or build package file. 2. Upload package file. A red arrow points from the 'Upload package file' text to a 'Browse...' button, and another red arrow points from the 'No file selected.' text to an 'Upload' button. Below this section, there is a 'Manage Existing Extensions' section with a 'Check for Upgrades' button, and a 'Channel: Magento Community Edition' section with a 'Commit Changes' button. At the bottom right, there is a checkbox for 'Clear all sessions after successful install or upgrade:'. The 'Settings' section includes a checked checkbox for 'Put store on the maintenance mode while installing/upgrading/backup creation' and an unchecked checkbox for 'Create Backup' with a dropdown menu set to 'Database'.

4. Return to website back end, log out and then log in again.
5. Under **System** → **Configuration** → **Design** enter **rwd** under **Package** Section and **dark-vault** under **Themes** Section:

The screenshot shows the Magento Admin Panel interface. The top navigation bar includes the Magento logo, 'Admin Panel', and user information. The main navigation menu has 'System' selected. The left sidebar shows the 'Configuration' menu with 'Design' highlighted. The main content area is titled 'Design' and shows the configuration for the 'rwd' package. The 'Themes' section is expanded, showing 'dark-vault' selected for 'Skin (Images / CSS)', 'Layout', and 'Default'. Several 'Add Exception' buttons are visible, and a red box highlights the 'Design' menu item and the 'Add Exception' buttons.

6. Flush Magento Cache under **System** → **Cache Management**.
7. Congratulations! Dark Vault theme is successfully installed and it's that easy.

## Bug Reporting/Feature Request

Would like to report a bug, request a new feature or simply ask a question? Feel free to email us at [support@orange35.com](mailto:support@orange35.com) and we'll gladly assist you.
